Cable Warranty

Unless otherwise stated, cables manufactured by Concept Cables Ltd have a minimum design life of:

- Thermoplastic Polyurethane / Thermoplastic Elastomer Jacketed Cables - 8 years.
- Polyolefin / Polyethylene Jacketed Cables – 20 years

However, due to the widely varied applications and methods of deployment that are outside our control, we are unable to guarantee the working life of the cable.

We do guarantee all cables against failure in the first 12 months from delivery (excluding connectors) where the cause of such failure is shown to be faulty materials, poor workmanship or where the cable design did not meet the criteria specified by the customer.

To maximize the cable life and so that this warranty is not breached, It is important that the following cable limitations, where specified, are closely observed:

- Minimum bend radii
- Current Ratings
- Voltage Ratings
- Maximum Operating Temperatures
- Minimum Cold-Flex Temperatures
- Maximum Working Loads

If the cables are likely to come into contact with any chemicals or substances that could possibly be detrimental to the cable materials, please seek advice from our technical department.

The cables are not warranted against damage, fair-wear-and-tear or termination failure.
